

USB Update procedure for: SRT 8210, SRT 8211 and SRT 8212

The following manual describes the procedure for a software update at your receiver via your PC and portable USB storage device.

Hardware Requirements:

- PC, Laptop or other similar operating device/ system with USB 2.0 port. Other systems might require different procedures.
- External USB storage device formatted in FAT 32

Note: Please check/ensure that power consumption of your USB device is not higher than 5 V/500 mA. In case of higher power consumption, please use another device, preferable USB Stick /Memory Stick.

Procedure at your PC:

1. Connect an USB device to your USB port at the PC (or similar device). Usually your PC displays a message for a new found/connected hardware (removable disk). If this is not the case directly you may need to wait for driver installation of this USB device.
2. Please make sure the connected USB device provides sufficient free storage capacity (~50 MB)!
3. Save the zipped file to this connected USB device. Unpack the files there (right mouse click: "Unpack here..." or double click and extract, then choose the root directory to save the files).
4. Now the **.bin** and **.cfg file** from the downloaded package have to be placed in the root directory of the connected USB device.
5. Remove the USB device from your PC by pressing the right mouse button at task bar to "Safely remove hardware" in order to avoid any problems.

Procedure at your receiver:

Switch ON your receiver and connect the USB device with the software to the connector at the corresponding port of your receiver. After the USB device has been inserted, you can perform the software update according to the following steps:

1. Wait until the receiver successfully detects the connected USB device – a message will inform you.
2. After this wait for short until the receiver informs you that there is new SW detected on your USB.
3. Now use the <> buttons to select **OK** and press **OK** to perform the update.
4. Your receiver will reboot into Update mode, please wait patiently until the update process is finished! Once the update procedure is finished, the display will show "End" and "Good".
5. You can remove the USB device from the receiver now please!

NEVER disconnect the USB device from the receiver or switch OFF power during the update procedure. It can damage your device and warranty will void! As soon as the update has been finished, the receiver restarts automatically within the „First time installation“!
