

Note: KeyEditor program was adopted to work with the receivers Ariva, due to this fact not all the options works.

For us it is important to easily edit and upload keys via USB. Therefore, editing keys should be done only below way !!

1. Start the program
2. Select **Menu** → **Open** and view all file types and select the key data base for Arivy **key.db**

3. Immediately after opening the file, you are asked:

Answer → NO

4. Start editing keys.
5. When finished, select **File** → **Save** and quit the program.
6. Then upload the file **key.db** from USB drive to receiver.
