

HowTo connect your Vu+ Zero via RS232 Serial connection.

First of all you will need an RJ12 connector (if you do not have 1 already you can get 1 from eBay or local hardware store should be able to help).

The RS232 connection on the back of the Vu+ Zero has the following pinout.

You need to wire as follows.

	RJ12		DB9F	
GND	5	<-->	5	GND
TX	2	<-->	3	RX
RX	1	<-->	2	TX

The pinout of a conventional RS232 connector looks like this:

Your RJ12 connector should look something like this:

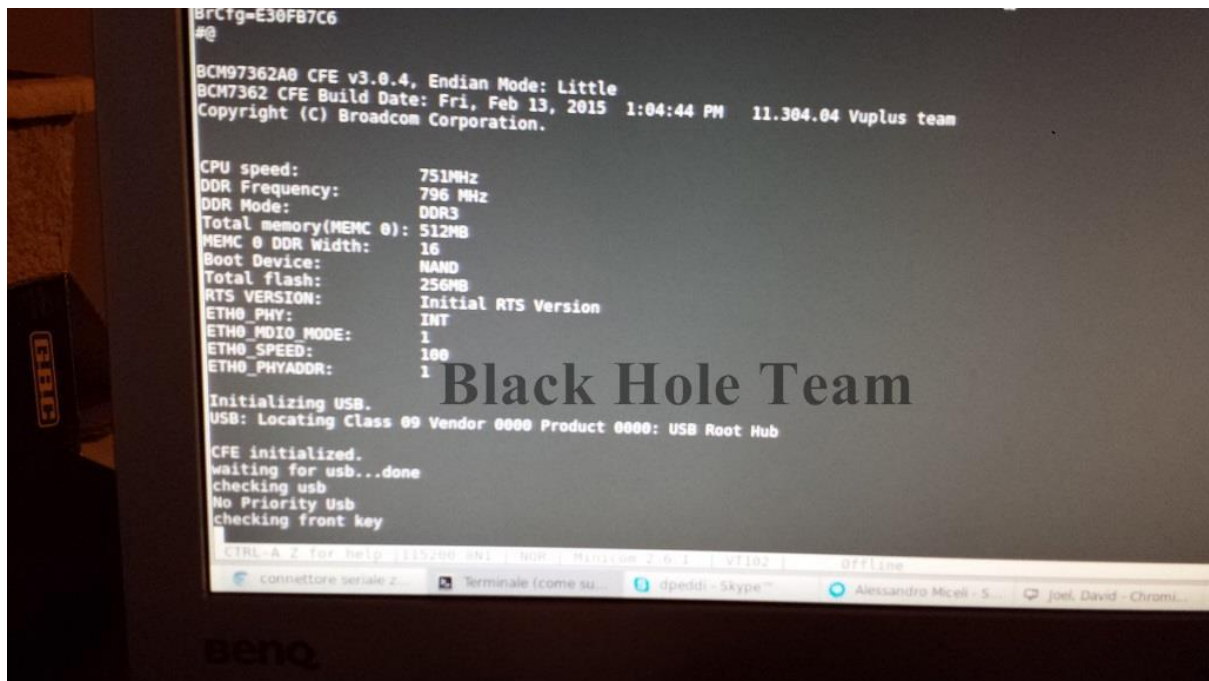

Connect the 3 wires into the RS232 serial connector like this:

Connected to Zero:

Then once connected to your terminal program (such as putty), you should see something similar to this:

If you see an output similar to the above picture, that it all done and working.
